## DETAILED ACTION

### *Drawings*

1. The drawings were received on Sept 05, 2003. Examiner accepts these drawings.

### *Allowable Subject Matter*

2. Claims 1-36 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 10, and 21, although, the prior arts disclose a communication buffer in a local host comprising: receiving from the remote host a received message having a received message identifier therein; determining whether the communication buffer is in a predetermined buffer state. However, none of them teach, a portion of committed memory storing a transmitted message copy; if the communication buffer is in a predetermined buffer state, then storing the received message; if the communication buffer is not in a predetermined buffer state, then designating the received message identifier as a release identifier; and denominating as free memory the portion of committed memory storing the transmitted message copy associated with the release identifier as specifically described in claimed.

Regarding claim 29, although, the prior arts disclose a telecommunication system comprising: receiving, from a remote host by a local host. However, none of them teach, the selected memory location being reversibly write-inhibited; monitoring the communication buffer for a predetermined buffer state; and if the communication buffer is in the predetermined buffer state, then reversibly write-enabling the selected memory

location in which the selected previously unacknowledged message indicated by the acknowledgement sequence number is stored as specifically described in claimed.

Regarding claim 30, although, the prior arts disclose a telecommunication system comprising: memory adapted to buffer copies of ordered messages transmitted to a remote device over a packet-switched network. However, none of them teach, differential processing memory controller configured to examine the response indicant, responsive to a preselected memory state, wherein the response indicant acknowledges copies in selected committed memory, wherein the memory controller denominates selected memory associated with the response indicant as free memory, the free memory being reversibly write-enabled; and wherein the memory and differential processing memory controller are constituents of a mobile wireless communication device as specifically described in claimed.

Claims 2-9, 11-20, 22-28, 31-36 are allowed as being dependent on independent claims 1, 10, 21, and 30.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
